## Ambu King LTS-D

The Ambu King LTS-D laryngeal tube is a disposable, simple to use alternative airway device that provides superior patient ventilation. The King LTS-D allows the passage of the gastric tube through a separate channel.

The King LTS-D is designed with a straightened, beveled distal tip that assists in directing the airway posterior to the larynx and into the upper esophagus. Due to this unique configuration, there is minimal risk of the device entering the trachea.

A single port inflates both proximal and distal cuffs. The proximal cuff stabilizes the King LTS-D and seals the oropharynx. The distal cuff blocks entry of the esophagus, reducing the possibility of gastric insufflation. Ventilatory seal pressures of 30cm H<sub>2</sub>O or more are achievable with the King LTS-D. Multiple distal ventilatory openings and bilateral ventilation eyelets facilitate air flow.
