

TRACOE silcosoft®

FITS TO KIDS

**Soft silicone tracheostomy tube
for neonates and children**

- Specially reinforced eyelets
- With and without H₂O Cuff
- Embedded cuff supply line
- Different length variants in stock

TRACOE®

TRACOE silcosoft®

FITS TO KIDS

Soft tracheostomy tube

Children's anatomical structures are highly sensitive and react strongly to manipulation and compression. A child's trachea is narrow and very soft. A flexible, kink-resistant but soft tube is gentle on the tracheal mucosa and the stoma itself. The advantages of silicone: soft, well tolerated, flexible, thermally stable, less susceptible to incrustation, transparent and easy to clean.

The characteristic anatomical features of a large occipital region and a short neck, especially in infants, causes antelexion of the head and makes access to the tracheostoma more difficult. Proximally extended tubes reduce the risk of pressure marks on the chin or chest and the risk of the connector being occluded by the chin. In addition, the child has more freedom of movement and the 15 mm connector of the tube is easily accessible.

The TRACOE silcosoft is our contribution to the safety and well-being of the child.

No tearing!

- Patented, specially reinforced eyelets in the neck flange prevent the wings from being torn by the neck straps, e.g. by hook-and-loop fastener
- Reduces the risk of tube dislocation

Embedded!

- The cuff supply line is embedded in the material of the tube wall
- Wearing comfort – the supply line is not bulky or noticeable
- Reduces the risk of lesions
- With deflated cuff, no obstruction of the expiratory airflow

Flush and clear!

- Sensitisation, phonation or communication when the H₂O Cuff is deflated
- Largest possible free expiratory lumen between the tube and the tracheal wall
- Soft water cuff lies flush when deflated*

*To inflate the cuff use e. g. the minimal occlusive volume technic.

Curved!

- The neck flange has been adapted to the child's anatomy with a slight upwards shaped curve
- Standard tube with blue printing
- Length variants with green printing

Flexible!

- Kink-resistant and flexible over the entire length
- Retains its shape thanks to the tight winding of the nitinol spiral
- Very soft tube tip (distance of 4 mm to the start of the spiral)
- MR conditional and radiopaque

In stock!

- The size of the tube, but more particularly its length has to be constantly adapted to the child's growth
- In children, the length of the tube increases more than the diameter
- Sometimes a good fit can be decided by mere millimetres
- Several length variants are available from stock soon

SCOPE OF SUPPLY AND DIMENSIONS

Proven ring obturator with standard lengths

- well accessible for safe insertion of the tube
- large ring opening allows quick removal

Shapeable obturator as an insertion aid for

- length variants
- proximal longer tubes

Disconnecting wedge

- for removal of accessories from the connector

Neck strap for children

- soft, padded, adjustable neck strap with hook-and-loop fastener, made of two parts

without cuff

with cuff
